Instructions for Replacing
Mailbox Door
(Barcelona Style)**

1st step: Place door in aligned position with mailbox opening. Make sure it is flushed with opening and the door tabs are aligned and have enough metal for a 3/16" hole.

2nd step: With a 3/16" drill bit on a drill, go through preset hole on mailbox and drill the tabs on mailbox door.

3rd step: When hole is done on one side, place a 8/32" x 1 3/4" stainless steel screw through first hole drilled and a nut. Do not tighten yet just place the nut and turn nut a couple of times with fingers.

4th step: Align door with mailbox opening and align preset mailbox door hole for the next tab. Once you've aligned it, repeat step 2 and 3.

5th step: Now hand tighten both screws and nuts and with a screw driver tighten screw about less than a quarter turn only each.

6th step: Make sure door opens and closes and either apply a little more pressure by tightening screws or less pressure by loosening the screw to allow door to open and close correctly.
